

JUSTEN FRY

Livonia, MI 48152

734-686-4254

JustenFry@hotmail.com

SUMMARY

Methodical Electronics Test Technician recognized for productivity and efficiency in completing tasks. Possess specialized skills in circuit analysis, troubleshooting complex electronics systems, and implementing quality control measures. Excel in critical thinking, problem-solving, and communication, ensuring clear understanding and swift resolution of issues encountered during testing processes.

SKILLS

- Python and C++ programming
- Electronics repair and maintenance
- Data collection and analysis
- Interpersonal communication skills
- Technical documentation and manuals
- Batch file and PowerShell scripting
- Measurement tools and techniques
- Multitasking and organization
- Problem solving and troubleshooting
- Personal integrity and performance excellence

EXPERIENCE

Gig work

Livonia, MI

Independent Contractor

08/2024 to Current

- Working independently through gig jobs that challenge and expand current skillsets
- Project management and budgeting for incoming orders and requests.
- Rapid prototyping for customized systems using microprocessors, 3D printed parts, and Python: i.e. automation and systems integration.
- Provide additional troubleshooting and customer support beyond delivery.

Insight Global

Warren, MI

Validation Technician

10/2023 to 04/2024

- Served as contract agency employee at General Motors Global Technical Center.
- Flashed updated firmware to control module via OBDII port using MDI2.
- Reported and tracked issues through Azure DevOps system.
- Calibrated and learned vision systems for enhanced performance.

Ford Motor Company

Dearborn, MI

Lab Technologist

05/2018 to 08/2022

- Utilized 3D printing and microprocessors for rapid prototyping, accelerating product development.
- Created intricate designs and prototypes through advanced 3D modeling and printing techniques.
- Managed lab resources and inventory to ensure efficient project execution.
- Assisted engineering team with data collection, documentation, and presentation of key findings.
- Coordinated logistics for team demonstrations at international conferences, boosting global visibility.
- Provided troubleshooting support for A/V systems during critical multi-configurable demonstrations.
- Demonstrated effective management of team assets, enhancing operational efficiency and reducing costs.

Aerotek

Dearborn, MI

Lab Technician

07/2017 to 04/2018

- Provided vital support for simulation activities at Ford Motor Company Research and Innovation Center.
- Executed simulation build, modification, removal, and installation processes to maintain system integrity.
- Assisted engineering team with data collection, documentation, and presentations for project success.
- Conducted minor repairs on IoT and mobility system machinery to ensure operational efficiency.
- Facilitated adoption and integration of new software and hardware configurations to enhance technological capabilities.
- Led data collection clinics for UX validation, contributing to rigorous post-clinic data validation.
- Maintained and organized lab and storage spaces to optimize workflow and accessibility.

Movement Search

Madison Heights, MI

Engineering Technician

10/2015 to 12/2016

- Served as a dedicated contract agency employee stationed at Kostal North America.
- Oversaw all phases of Design Verification and Process Validation testing for Electronic and Mechatronic products.
- Managed testing processes for Seat Adjust Switch, Steering Wheel Switch, E-Shifter, Lighting Switch, and Drive Mode Switch.
- Conducted pre- and post-checks for critical tests, including Illumination, Environmental, Durability, Electrical, and Audible Noise Testing.
- Performed setup and teardown operations to ensure accuracy during all testing phases.
- Executed meticulous data collection and prepared comprehensive reports following testing completion.

Adecco Technical Staffing

Auburn Hills, MI

Test Technician

01/2015 to 04/2015

- Functioned as a contract agency employee stationed at Molex Automotive

- Oversaw all phases of Design Verification and Process Validation testing for connectors and terminals.
- Managed comprehensive testing processes for diverse product lines.
- Conducted meticulous setup and teardown operations for critical tests, including Visual Inspection and Electronic Testing.
- Executed pre- and post-checks across various testing methods, including Current Cycling and Environmental Testing.

Hella Electronics Corporation

Plymouth, MI

Test Technician

10/2012 to 01/2015

- Installed, removed, and calibrated radar systems while executing track testing procedures.
- Ensured quality and functionality through active participation in Design Verification and Process Validation for automotive modules.
- Tested various automotive components, including Memory Seat and Fuel Pump Control Modules, enhancing product reliability.
- Conducted thorough assessments on sensors like Transmission Range, Rain Light, and Radar Position Sensors to verify performance.
- Engaged in harness building, test simulator construction, and troubleshooting to improve testing efficiency.
- Performed thermal testing on electronic components to evaluate durability under extreme temperature conditions.

Forge Industrial Staffing

Livonia, MI

Assembler

10/2011 to 08/2012

- Served as a dedicated contract agency employee stationed at Electronic Design and Production (EDP).
- Constructed, repaired, and reworked all printed circuit boards (PCBs) in production process.
- Demonstrated expertise in Through Hole Circuit Assembly, ensuring precision in PCB assembly.
- Handled soldering and de-soldering operations for Through Hole and Surface Mount Technology (SMT) components.
- Conducted comprehensive testing and visual inspections of Charge Guard and Transducers for functionality and integrity.

EDUCATION

ITT Technical Institute

12/2014

Bachelor of Science Degree: Computer and Electronics Engineering Technology

Canton, MI

GPA: 3.58
